Calculus Readiness Diagnostic

The Calculus Readiness Diagnostic ensures that you start the Calculus sequence at the point where you are most ready to succeed. It will determine if you should start in MAT 190: Precalculus, MAT 181: Foundations of Calculus I + MAT 191: Calculus, or MAT 191: Calculus.

Your advisor will not be able to pre-register you for a math course, even if one is required by your major, until you take this diagnostic.

If you are majoring in, or considering majoring in, one of these subjects, you are required to take the diagnostic:

- Biology (BA)
- Biology (BS)
- Biochemistry (BS)
- Chemistry (BA)
- Chemistry (BS)
- Computer Science (BS)
- Mathematics (BA)
- Mathematics (BS)
- Mathematics: High School Teaching (BA)
- Physics (BA)
- Physics (BS)

For more information about the Diagnostic, click [here](#).

**How to take the Diagnostic:**

1) Log in to Canvas using your iSpartan log in (the same as for your email).
2) Click on the Calculus Readiness Diagnostic box linked on your Dashboard (it’s the one with the picture of Math Cat).
   a) You should already have access to the Diagnostic in your UNC Greensboro Canvas account. If you don’t, please contact Caitlin Saraphis ([cmsaraph@uncg.edu](mailto:cmsaraph@uncg.edu)) for assistance.
3) Explore the Review Precalculus Materials section.
4) Click Take the Initial Attempt to take the Diagnostic.

You will have two opportunities to take the diagnostic. If you are not happy with your initial placement, you can work with the Math department to review materials and take the diagnostic a second time (by July 15) to try to place higher.

Once you have completed the diagnostic, you can work with your advisor to adjust the math class on your schedule.
